4 Types of Personal Information Attackers Can Easily Exploit

Email Addresses

- Often exposed through data breaches or public profiles.
- Used for phishing, spam, and brute-force attacks on accounts.
- Can lead attackers to other linked accounts and personal data.

Home Addresses

- Found in public records, social media, or online directories.
- Exploited for physical stalking or identity theft.
- Used to impersonate you for fraudulent activities like opening accounts.

Phone Numbers

- Public posts reveal details like birthdays, locations, and habits.
- Photos and check-ins provide real-time location data.
- Open profiles can expose connections, making it easy to impersonate or scam friends and family.

Social Media Profiles

- Public posts reveal details like birthdays, locations, and habits.
- Photos and check-ins provide real-time location data.
- Open profiles can expose connections, making it easy to impersonate or scam friends and family.
